

Falls Community Health Governing Board Resolution

Resolution: Resolution to support Patient Centered Medical Home (PCMH) as the Principals of Practice for Falls Community Health.

Patient Centered Medical Home is a health care delivery model defined by six core principles:

- Enhanced access and continuity
- Appropriate identification and management of patient populations
- Planning and managing important health conditions
- Providing self-care support and community resources
- Tracking and coordinating care
- Continuous measurement and improvement of performance

The FCH Governing Board believes these guiding principles will improve the quality, effectiveness, and efficiency of care delivery, and to ensure that the activities within the practice are focused on meeting patient needs first.

The FCH Governing Board supports the leadership team in its application and continued pursuit of PCMH Principals of Practice.
